

Practical 03: Creating an Application in Salesforce.com using Apex programming

Language Student Management Application

Step 1: Create a Salesforce Account and Login <https://login.salesforce.com/>

Step 2: Create Custom Object (Student)

- Go to **Setup**
- Search: **Object Manager**
- Click **Create** → **Custom Object**
- Fill details:
 - Label: Student
 - Object Name: Student
- Save

Step 3 – Add Fields:

Go to Fields & Relationship □ New □ Create all fields below one by one.

- Name (default)
- Age (Number)
- Email (Email)

- Course (Text)

Step 4: Create Apex Class

1. Go to **Setup** → **Apex Classes**
2. Click **New**
3. Write this code:

This class:

- Inserts student data
- Retrieves student records

```
public class StudentController {
```

```
    // Method to insert student
```

```
    public static void addStudent(String name, Integer age, String email, String course) {
```

```
        Student__c s = new Student__c();
```

```
        s.Name = name;
```

```

s.Age__c = age;

s.Email__c = email;

s.Course__c = course;

insert s;

}

// Method to get all students

public static List<Student__c> getStudents() {

return [SELECT Id, Name, Age__c, Email__c, Course__c FROM Student__c]; }

}

```

Step 5: Add Validation Rule (Instead of Trigger)

We'll enforce the “Age ≥ 18 ” condition using **no-code validation**.

Steps:

1. Go to **Setup** → **Object Manager** → **Student**
2. Click **Validation Rules**
3. Click **New**

Enter:

- **Rule Name:** Age_Validation
- **Formula:**

Age__c < 18

- **Error Message:**
Student must be at least 18 years old.

Step 6: Test Your Apex Class

Now test your class from **Developer Console**.

Steps:

1. Go to setup button but you will find **Developer Console** below setup icon.
2. Go to **Debug** → **Open Execute Anonymous Window**
3. Run:

4. Valid case:

```
StudentController.addStudent('Rahul Sharma', 20, 'rahul@email.com', 'Computer Engineering');
```

Invalid case:

```
StudentController.addStudent('Amit', 16, 'amit@email.com', 'IT');
```

Step 7: Create a Custom App (UI)

Now let's build a simple UI.

Steps:

1. Go to **Setup** → **App Manager**
2. Click **New Lightning App**
3. Enter:
 - App Name: Student App
4. Click **Next** → **Next**
5. Add **Student Object**
6. Finish
